All,

In case you were not aware of this.

Matt and Alex,

I just learned about this today from KM environmental consultant. KM facilities didn't coordinate with environmental side early on so notification to me was delayed. They wanted to know if I had seen it yet b/c DEQ comments from 401 group are due Feb 2nd. I said no but went and chased it down from Amy this morning. It was still in her stack, they have a lot of permits in right now.

I still need to review in full but my preliminary questions/comments would just be recommendations to monitor for sheens and such and take notes of what they see. If sheen comes out from a pile they should record the location. Of course creosote can cause sheen but not that likely in cold river and old pilings. I might mention the DDT issue under Willbridge dock if application not clear that they won't be touching that area. Proper BMPs and contingency plans should cover any sheen and turbidity in DDT area, but facility and work crew should be aware of it at least so they know where to enact.

Take a look and let me know if you have comments or if I should do anything differently.

Mike

Mike,

Attached is the Joint Permit Application for Kinder Morgan's proposed dock improvements at the Willbridge and Linnton Terminals.

Please let me know if you would like to meet to discuss this project and if there are any conditions you would like to see added to the 401 Water Quality Certification. I'll be out next week, but would be happy to meet when I get back.

Thanks,

Amy

Hi Amy,

Thanks for talking to me earlier today about the permits for the dock repair/piling replacement. The facilities are the Kinder Morgan Bulk fuels terminals listed below:

Kinder Morgan Liquid terminals, LLC-Linnton Terminal  
11400 NW St. Helens Rd

Kinder Morgan Liquid Terminals – Willbridge Terminal  
5880 NW St. Helens Rd.

Mike
